

LF8A: Snap frame & leaflet dispenser panels in free standing frames

ASSEMBLY INSTRUCTIONS

(NOTE: Assembly is simpler with 2 people!)

1. Lay one post horizontally on a flat surface with one of the channels uppermost.
2. Fix the two cross-bars (joined by the snap frame) so that the top bar is at the very end of the post. See 'fix cross-bar to post' instructions overleaf. Fix firmly, but do not tighten too much as the position may need to be adjusted later.
3. Fix the second post to the structure in the same way, lining up the top of the post with the top cross-bar.
4. Slide the leaflet dispenser panel into the channels of the posts. It should slide into the groove of the cross-bar as well as those in the posts.
5. Fix the base to the posts (see overleaf).
6. Stand display up. If necessary, adjust the cross-bars attached to the snap frame so that the dispenser panel fits fully into the groove of the cross-bar, holding it is neatly and securely in place
7. Push end caps into tops of posts.

ASSEMBLY INSTRUCTIONS

FIX CROSS-BAR TO POST

1. Ensure that parts of lock in end of cross-bar are 'together'
2. Position lock in post so that cross-bar is in desired position. Locks should be at the back of the display.
3. Use allen key to tighten lock so that lock opens and cross-bar is held securely in place

FIX BASES TO POSTS

1. Undo spigot (remove bolt)
2. Put bolt through weighted base plate from underside and part-screw rectangular fitting (comes split diagonally into two parts) back on to bolt.
3. Place rectangular part of fitting inside base of post.
4. Ensure that base of post is pushed firmly and squarely up against base and tighten bolt using large allen key supplied (to lock post securely to base).
